

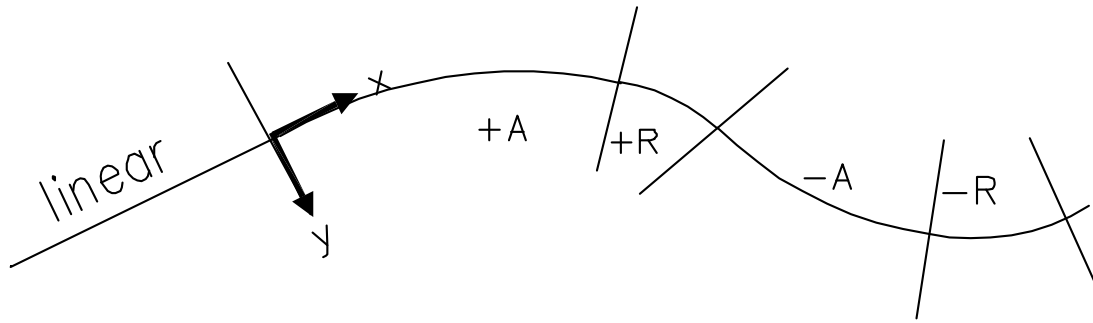

Figure 3.2: Lane axis

- Definition about 3D points at a curve The coordinates have to be input for all records. The given direction (NX,NY,NZ) is the local z-axis and thus a defined circular arc turns around this vector.

```
GAX  A1-X S  0.0  X -1.000 TITL 'CENTER GEOMETRY'
      S 16.0  X 30.000 R 150.0 NZ 1.0
```

The described elements will be automatically adopted from WinGRAF as dynamic axis. A graphical check is recommended with the programs WING or WinGRAF.

The options to define the elevation or cross falls are now only available in SOFiMSHC.
